**Color** Re

The visibility and the lenght of the line depend on the mounting of the laser and the brightness of the environment. For better use you have to specify the focus distance. If not specified, emitter is focused for infinity. The lens has a spread of 90°. The line has a wide of mm 1800 at a distance of mm 1000 from the emission point, perpendicularly to laser

beam. Other optical projections available on request
